ACKNOWLEDGEMENT

Any software project is not a work of an individual. It combines efforts, ideas, suggestions, reviews and hard work. We express our sincere gratitude to all those who initiated and helped us in the successful completion of our project. One of the most pleasing aspect in collecting the necessary information and compiling it is the opportunity to thanks those who have actively contributed to it.

I would like to thank my guide for his guidance and cooperation render for following me to undergo training under his guidance. I also thank all the other college staff who had helped me in spite of their busy schedule.

My special thanks to **Mr. Tarun Kumar Sharma , Assistant Professor (Sr. Scale)** for his active support, affectionate, guidance and constant encouragement.

I am highly indebted to **Prof. (Dr.) Devendra Kumar (HOD- MCA)** for his continuous effort in building a good infrastructure and develop a professional attitude within ourselves during the academic period of MCA.

MCA-IV Semester

ABSTRACT

The Community Problem Reporter is a web-based application developed to help citizens report and track issues in their local area. In many places, problems like potholes, garbage overflow, broken streetlights, and water leakage often go unnoticed or unresolved due to a lack of proper communication between the public and authorities. This system aims to provide a simple and organized way to bridge that gap.

The application is built using React.js for the frontend and Node.js with Express for the backend, with PostgreSQL used as the database for storing and managing data. Users can register on the platform, submit complaints along with descriptions, images, and location details, and track the progress of their reports. On the other side, administrators can view all reported issues, update their status, and take necessary action.

To make the system more interactive, features like voting and comments are included so that important issues can be identified based on public concern. This helps in prioritizing problems that affect a larger number of people.

Overall, the Community Problem Reporter makes the complaint process more transparent and accessible. It encourages active participation from citizens and helps authorities respond more efficiently, leading to better management of community problems.
